## Maritime Services

ESPADA Security Services provides a comprehensive suite of security services for the merchant marine and offshore industries.

Our team members fully understand applicable international laws and adhere to strict rules of engagement (ROE) designed to provide maximum protection to our clients while deterring conflicts at sea.

Each team member is hand selected from a vast pool of highly qualified individuals, many of whom are former US military personnel, with specialized training in security and special-operations tactics.

The principle goal of our teams is to focus on effective ways to discourage criminal elements from initiating hostile acts while maintaining a safe standoff distance for the client vessel. It will always be our prime objective to effectively safeguard vessels and crews in our care while exercising the utmost caution in the use of force.

More information about our extensive maritime capabilities can be found on our website: [www.EspadaServices.com](http://www.EspadaServices.com).

### ESPADA Provides the Following Services:

**ESPADA Security Teams cover 80 percent more of the piracy areas than any other competitor.**

#### Embarked Security Team

ESPADA offers experienced security teams to provide close-in protection onboard client vessels and offshore platforms in the Red Sea, Gulf of Aden and East Coast of Africa. Our courteous and discreet professionals understand that maintaining the safety of our client's crew and asset investment is paramount. Our teams will be ferried to your vessel prior to entering a dangerous area, work to deter threats at a safe distance, then disembark with no delay to your normal transit schedule.

#### Security Assessments and Crisis Consulting

Vessel owners and operators have procedures in place that dictate how crews should respond in case of an emergency. However, it is imperative that procedures be constantly reviewed and updated utilizing the latest threat intelligence, knowledge of hostile tactics, and available protection technologies. ESPADA's expertly trained professionals can review your crisis management procedures, recommend any necessary changes and/or supplemental technologies, and train your crews and management in their implementation.

#### Pier/Anchorage Security Team

ESPADA's security teams can join a client vessel in port, establish a security presence and perimeter, and work to ensure that pier-side operations proceed smoothly and safely. Port security operations can be conducted by shore-based teams who, in high-threat port areas, can also work in conjunction with small craft provided by ESPADA to provide expanded security.
